

# CashEnvoy WHMCS Plugin

## NOTE:

1. This plugin was developed and well tested using version 6.02, if there is/are any error(s) in any attempt to use this plugin for higher or lower versions of WHMCS, kindly get in touch [support@cashenvoy.com](mailto:support@cashenvoy.com)
2. Please patient enough to wait for the support email instructing you to switch your integration to live (production) mode before doing so.

There should be two files in the plugin folder (cashenvoy.php and cashenvoyresponse.php) after extracting the compressed file.

Using your preferred text editor, open the two files and effect the following changes.

Change:

1. The Merchant Id to your own (In both files).
2. The Secret key to your own (In both files).
3. The URLs depending on your present CashEnvoy merchant status (test mode or live mode).

### **For Live Mode:**

\$gatewayurl= <https://www.cashenvoy.com/web service/?cmd=cepay> (In cashenvoy.php)

\$url = <https://www.cashenvoy.com/web service/?cmd=requery> (In cashenvoyresponse.php )

### **For Test Mode:**

\$gatewayurl = <https://www.cashenvoy.com/sandbox/?cmd=cepay> (In cashenvoy.php)

\$url = <https://www.cashenvoy.com/sandbox/?cmd=requery> (In cashenvoyresponse.php )

4. Upload cashenvoy.php to your (/modules/gateways/ folder) and cashenvoyresponse.php to your (/modules/gateways/callback/) directory or folder on your hosting server using your preferred FTP client.
5. Go to Settings -> Payments -> Payment Gateways and:
  1. Activate the CashEnvoy Payment Gateway under the All Payment Gateway settings tab and
  2. Configure the settings and save the changes for the gateway under the manage existing gateways tab
